

THE USE OF FRAGRANCES IN THE CO₂ WASHING PROCESS

ABSTRACT OF THE DISCLOSURE

A process for cleaning soiled garments and fabric materials using a liquid or supercritical CO₂ system, whereby a fragrance system having at least 75% of the ingredients having a relative fabric affinity value (y) of at least 4 or having at least 60% of the ingredients having a relative fabric affinity value (y) of at least 6 is added to the CO₂ is disclosed. The fragrance system, once it is applied on the garment and/or fabric material, is substantive and gives a long lasting odor.
